progress or megakaryoctyic abnormality, myeloproliferative dihaematopoietic disorder, platelet disorder or leukaemia; and tractment of a subject (including a prenatal subject) having megakaryocytic abnormality, myeloproliferative disorder, platelet disorder, leukaemia or neural disorder using a nucleic acid that expresses SH3DIA or its antisense nucleic a abnormalities, dysfunctions and disorders including brain malformations and corresponding cognitive dysfunctions, microcephaly, lisencephaly, and colpocephaly. Methods are also provided for: suppressing cells unable to regulate themselves; screening for a somatic alteration in the SH3DIA gene; monitoring the progress and adequacy of a treatment; monitoring tumour risk megakaryocytic abnormality, myeloproliferative disorder, platelet disorder, acute leukaemia, neural disorders, tromobocytopenia, platelet disorder on chromosome 21, low platelets in deletion for 21, association of gains in chromosome 21 with leukaemias, neural Sequencing of 5 different sizes of cDNA clone from foetal brain (see AAZ34570-74) suggests that at least 3 isoforms exist. The invention provides methods for the diagnosis and treatment of disorder, acid

The SH3D1A gene megakaryocytic fineage. The SH3D1A gene megakaryocytic lineage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            megakaryocytic lineage. The SH3DIA gene maps to the small candidate region for low platelets on chromosome 21. Sequencing of 5 different sizes of CDNA clone (see AAZ34570-74) suggests the streams of softens exist. The invention provides methods for the diagnosis and treatment of megakaryocytic abnormality, myeloproliferative disorder, platelet disorder, acute leukaemia,

The invention relates to isolated polynucleotide (I) and CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, Oligomers, and for chromosome CC polynucleotides are also used in dispostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC for restore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC disgnostice, forensics, gene mapping, identification of mutations CC and to produce other types of data and products dependent on DNA and CC amino acid sequences. ARS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed CC at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                  CC The invention relates to human polynucleotides (AAI63803-AAI64012) and CC the encoded proteins (AAM434497-AAM43660) useful for preventing, treating CC or ameliorating medical conditions e.g. by protein or gene therapy. The CC genes were isolated from a range of human tissues disclosed in the CC specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, CC e.g. breast and ovarian cancer and other cancers of the adrenal gland, CC bone, bone marrow, breast, gastrointestinal tract, liver, lung, or CC urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, CC cohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative CC colitis; (c) cardiovascular disorders such as myocardial ischaemias; (CC (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and CC epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infectious diseases such as viral, bacterial, fungal
                                                                                                                                                                             Query Match

The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease and amylotrophic lateral sclerosis, infections caused by bacteria, viruses e.g. Acquired immunodeficiency virus (AIDS) and fungi, ocular disorders e.g. corneal infection, gastrointestinal disorders e.g. corneal infection, gastrointestinal disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes an isolated nucleic acid molecule (I) encoding a novel central nervous system protein. (I) and polypeptides (III) encoded by (I), are used to treat a medical conditions and in diagnosis of a pathological condition. Disorders which are diagnosed or treated include
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              al Similarity

                                                                                                                                                                                                                                                                                                                                                                                                                                                       clones. 830 cDNA molecules encoding a human protein have been solated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             08-JUL-1999; 99JP-0194486.

                                                                                                                                                                                   S
                                                                                                                                                                                                                                                                                                                                        involving the megakaryocytic lineage. The SH3DIA gene maps to the small candidate region for low platelete on chromosome 21. Sequencing of 5 different sizes of cDNA clone from foetal brain (see AAZ34570-74) suggests that at least 3 isoforms exist. The invention provides methods for the diagnosis and treatment of megakaryocytic abnormality, myeloproliferative disorder, platelet disorder, acute leukaemia, neural disorders, thromobocytopenia, methods or chromosome 21. low platelets in deletion for 21, association of gains in chromosome 21 with leukaemias, neural abnormalities, dysfunctions and disorders including brain microcephaly, lissencephaly, and colpocephaly. Methods are also provided for: suppressing cells unable to regulate themselves; screening for a somatic alteration in the SH3DIA gene; monitoring the progress or megakaryocytic abnormality, myeloproliferative disorder, haematopoietic disorder, platelet disorder or leukaemia; and treatment of a subject (including a prenatal subject) having megakaryocytic abnormality, myeloproliferative disorder, platelet disorder using a nucleic acid that expresses SH3DIA or its antisense nucleic acid.

The present invention describes primer sets for synthesising 5602 (full-length cDNAs defined in the specification. Where a primer set CC comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the CC coligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises as sequence complementary to the CC complementary strand of a polynucleotide which comprises a 5'-end complementary to a polynucleotide which comprises a 3'-end sequence complementary to a CC polynucleotide which comprises a 3'-end sequence complementary to a CC polynucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence'3'-end sequence is selected from those defined in CC the 5'-end sequence'3'-end sequence is selected from those defined in CC the 5'-end sequence'3'-end sequence is selected from those defined in CC in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the CC detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow-obtaining of the full-length CC CNAS seasily without any specialised methods. AAH03165 to AAH13628 and CC AAH13631 to AAH13627 appresent human amino acid sequences; and AAH13629 to AAH13632 to AAH13632 to AAH13633 to AAH13635 to AAH13633 to AAH13635 to AAH13633 to AAH13636 to AAH13639 to AAH1369 to AAH1369 to AAH1369 to AAH1369 to

                                                                                                                                                                                                                                                                                                                                                                                                      CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC to restore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical considers involving aberrant protein expression or biological activity. CC disorders involving aberrant protein expression or biological activity. CC disorders involving aberrant protein expression or biological activity. CC disorders involving aberrant protein expression or biological activity. CC disorders involving aberrant protein expression or biological activity. CC disposities, forensics, gene mapping, identification of mutations in CC diagnostics, forensics, gene mapping, identification of mutations and CC and to produce other types of data and products dependent on DNA and CC amino acid sequences. AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO CC at fig. wipo.int/pub/published_pct_sequences.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               BG

                                                                      Clone distribution: MGC clone distribution information can be through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.Series: IRAK Plate: 14 Row: C Column: 5
This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 450
This clone has the following problem: retained intron.
                                                                                                                                                                                                                                                                                                                                                                                            DNA S
